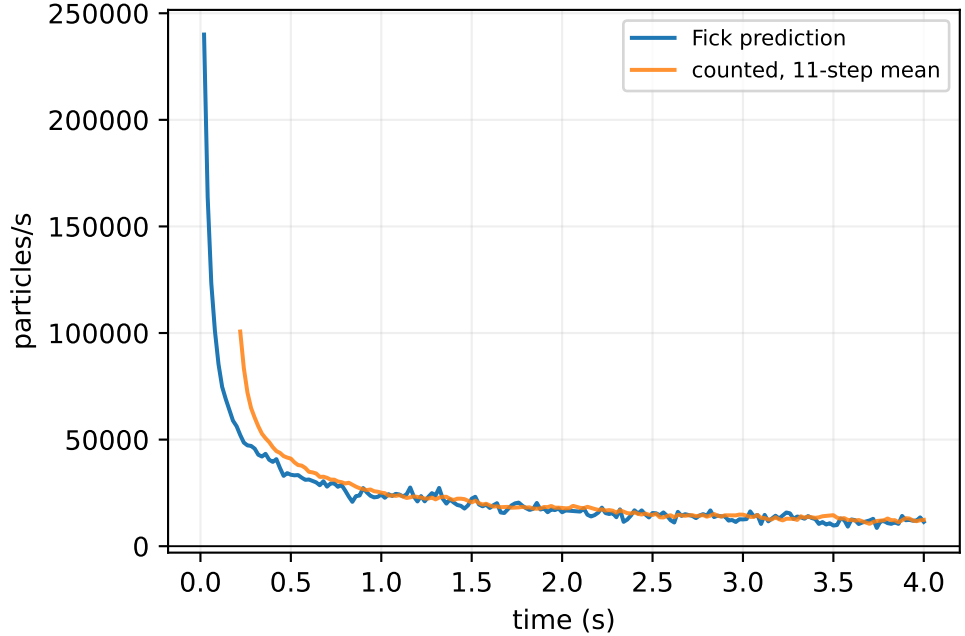
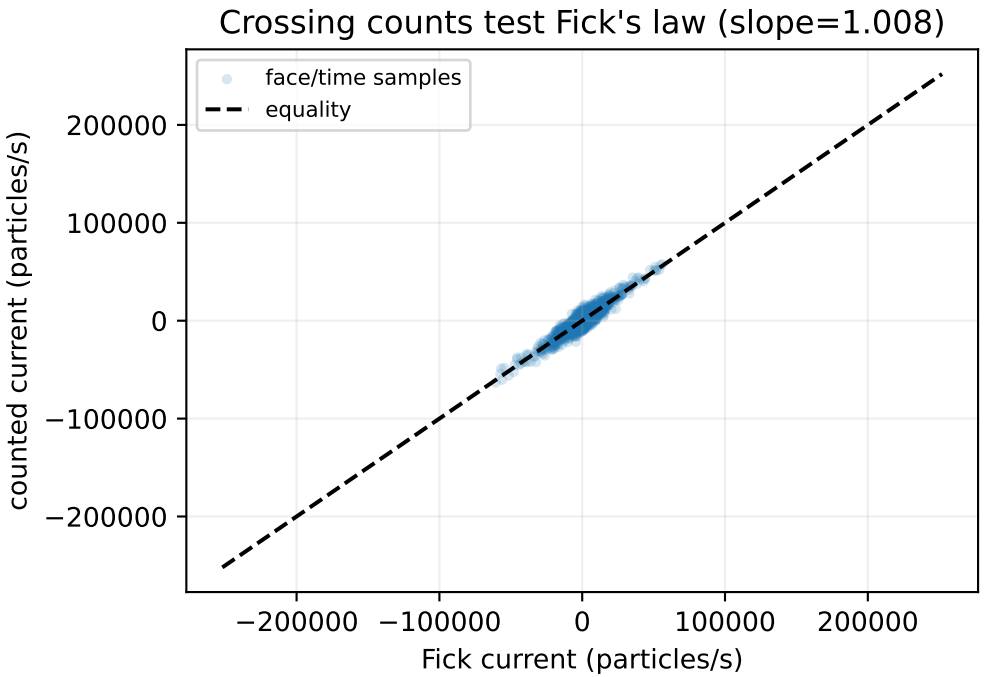
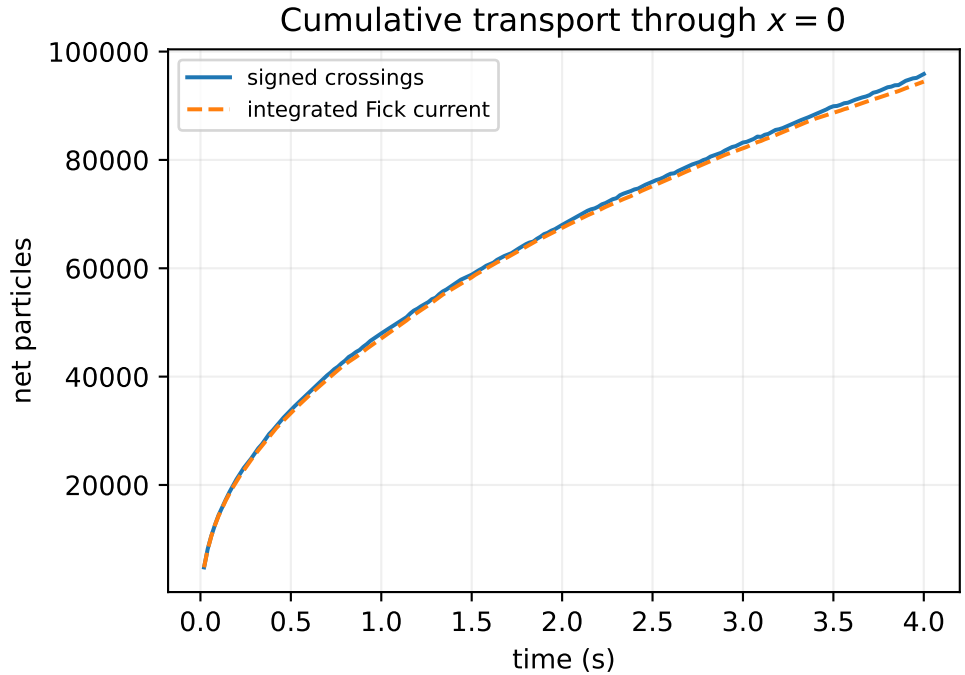
Relaxation of a density step
t = 0 s
t = 0.2 s
t = 1 s
t = 4 s
n (particles/μm)
x (μm)



Particle current through x = 0
Fick prediction
counted, 11-step mean
particles/s
time (s)



Crossing counts test Fick's law (slope=1.008)
face/time samples
equality
counted current (particles/s)
Fick current (particles/s)



Cumulative transport through x = 0
signed crossings
integrated Fick current
net particles
time (s)
